## DETAILED ACTION

### ***Claim Rejections - 35 USC § 101***

1. 35 U.S.C. 101 reads as follows:

Whoever invents or discovers any new and useful process, machine, manufacture, or composition of matter, or any new and useful improvement thereof, may obtain a patent therefor, subject to the conditions and requirements of this title.

Claim(s) 1-13 is/are rejected under 35 U.S.C. 101 as not falling within one of the four statutory categories of invention. Supreme Court precedent<sup>1</sup> and recent Federal Circuit decisions<sup>2</sup> indicate that a statutory “process” under 35 U.S.C. 101 must (1) be tied to another statutory category (such as a particular apparatus), or (2) transform underlying subject matter (such as an article or material) to a different state or thing. While the instant claim(s) recite a series of steps or acts to be performed, the claim(s) neither transform underlying subject matter nor positively tie to another statutory category that accomplishes the claimed method steps, and therefore do not qualify as a statutory process. For example the method for compressing and decompressing video image data including the steps of “selected pixel quantities are analyzed”, “contours of image structures are determined”, “smoothing and closure of contours is performed”, “contours that are in found in this way are described in segments in each case through a parameterized mathematical function”, “for individual objects and background a color dominance and color progression is determined”, “position and extent of the individual object are determined”, “a structure function is determined”, “different changes in

brightness, size, position, and orientation of the objects are determined” , “objects in the background that are defined”, “the basic frame data and sequence frame”, “in that from the basic frame data”, “for the background of the image and the objects,” , “which are reconstituted”, “the sequence frame data are applied” is of sufficient breadth that it would be reasonably interpreted as a series of step completely performed mentally, verbally, or without machine.

Applicant has provided no explicit and deliberate definitions to tie the method which includes the steps “selected pixel quantities are analyzed”, “contours of image structures are determined”, “smoothing and closure of contours is performed”, “contours that are in found in this way are described in segments in each case through a parameterized mathematical function”, “for individual objects and background a color dominance and color progression is determined”, “position and extent of the individual object are determined”, “a structure function is determined” , “different changes in brightness, size, position, and orientation of the objects are determined” , “objects in the background that are defined”, “the basic frame data and sequence frame”, “in that from the basic frame data”, “for the background of the image and the objects,” , “which are reconstituted”, “the sequence frame data are applied to limit the steps to a particular apparatus or device.
